

# Byte O. Verflow

## Senior Brainf\*ck Developer

Senior Brainfuck engineer with 10+ years of experience. Known for building production-ready software in a language nobody else knows. Strong focus on pointer acrobatics and explaining my code to LLMs.

slack Slack  
tex LateX  
ssh SSH  
apache Apache  
emacs Emacs  
qt QT

# Professional Experience

## Senior Brainfuck Developer

NullPointer Innovations • 2021 - present

- Led rewrite of company's critical microservice into pure Brainfuck; achieved 100% fewer dependencies and 300% more questions from management.
- Designed an advanced Brainfuck code formatter that outputs code looking exactly as unreadable as before (backwards compatibility guaranteed).
- Architected a CI/CD pipeline that refuses to deploy if code is *too readable*.

## Brainfuck Engineer

ObfusCo LLC • 2014 - 2021

- Implemented a Brainfuck-based authentication algorithm; auditors refused to review it, thereby improving security dramatically.
- Introduced team tradition of “Tape Alignment Friday” to improve morale.

## Education

### M.Sc. Computer Science

Technical University of Berlin • 2017

- Thesis: **“Efficient Memory Tape Models for Esoteric Languages”** (Efficiency not guaranteed.)

### 2014 – B.Sc. Computer Science

University of Somewhere • 2014

## Projects & Contributions

- **bf-enterprise™** — The world's first Brainfuck framework with enterprise-grade buzzwords (synergy modules still in beta).
- **bflint** — A linting tool that warns “no human should write this, please reconsider.”
- Contributor to **Esoterica Standard Library (ESL)** — adds high-level abstractions like “loop but on purpose.”

## Public Speaking

- “Memory-Tape Microservices: A Tragikomedy” — *Berlin Esolang Meetup*
- “Writing Maintainable Brainfuck (lol)” — *Internal tech talk, resulted in laughter and one resignation.*
